

Domain Name Tips:

It's better to use either dot com or a country specific extension, such as dot co.uk, dot ca, etc.

Avoid dot biz, dot org, dot info and any of the new extensions such as dot me, dot site, dot co etc.

Avoid hyphens

Avoid using numbers. For example, 'top10places' or 'toptenplaces'

Dot net is just about acceptable, but it's secondary to dot com or country specific extensions.

Domain Privacy:

Every domain name purchased is entered in the WHOIS database. This means that your name and address will be publicly available on this database.

If you do not want this, you can get domain privacy which hides your details on the WHOIS database.

Domain privacy costs an extra few \$'s a year and can be purchased from wherever you purchase your domain name from.
